(54) SILVER HALIDE COLOR PHOTOGRAPHIC SENSITIVE MATERIAL

(57)Abstract:

PURPOSE: To obtain a color photosensitive material having excellent sharpness and color reproducibility by incorporating at least one kind of specific compds. and at least one kind of the other specific two compds. in combination into said material.

CONSTITUTION: At least one kind of the compds. expressed by formula I and at least one kind of the compds. expressed by formula II or III are incorporated in combination into the above-mentioned material. In formula I, A denotes a group which releases PDI by reacting with the oxidant of a developing agent; PDI denotes a group which forms a development restrainer by reacting with the oxidant of the developing agent further after cleavage by A. In formulas II, III, R2 denotes an aryl group or heterocyclic group when R1 is an alkyl group or alkoxy group and R2 denotes an alkyl group, aryl group or heterocyclic group when R1 is an aryl oxy group or heterocyclic oxy group; X denotes a hydrogen atom, or coupling elimination group. The color photosensitive material having the excellent sharpness and color reproducibility and the improved sensitivity is thereby obtd.
